Heart of Eden

Welcome

Contents

Established in 1992, AHS has grown to become the market leader in the supply of bark and woodchip products to the landscape and playground industries throughout the United Kingdom.

With an established reputation for supplying all types of aggregates and many other landscaping and construction products, AHS is the one stop shop for all your landscaping and construction needs.

We work hard to ensure we provide a superior service along with quality products, competitive prices and raw materials obtained from renewable or sustainable sources.

We pride ourselves on having the best sales team in the industry, with in-depth knowledge of all our products, advising you on the most suitable solution for your project. AHS provides an unparalleled delivery service across the UK with extremely fast delivery times. As a customer, you will have a dedicated sales team member at the end of the telephone.

- 22 years' experience in handling wood-based materials
- An outstanding reputation for highly professional service
- A dedicated sales team on hand to discuss your requirements
- A logistics team to ensure we deliver what you want, where you want it and when you want it
- A deep-thinking business with a national and local outlook

As we are at the heart of sustainable forestry products, we have decided to no longer publish a hard copy of our brochure. However, you will find our full range of products listed within this e-brochure including, key features, application rates and delivery options.

Urban Green Newcastle

"When we took over the local parks in early 2020, we did a complete review of the play areas and decided to use **AHS Ltd** for our safety surfacing. As a registered charity, we are very conscious of the pricing of products but we did not wish to drop the level of standards required to ensure children's safety.

We worked with Will and the team at AHS Ltd to firstly order **8-40mm Play Bark**, which we found to be both bouncy and aesthetically pleasing.

We then discussed the benefits of trying **Hardwood Play Chips** as a comparison product, which we again found to be visually pleasing and very easy to spread.

Our young visitors are enjoying the new safety surfaces and we are looking forward to working with AHS Ltd again in the future!"

URBAN GREEN NEWCASTLE – MIKE

Soils

Get professional results with AHS soils. Whether you need free-draining subsoils, low-fertility or high grade but low pH top soil, we've got you covered.

All AHS soils contain a blend of carefully selected sands and top quality compost. They are screened, fully tested and compliant with industry standards to produce the best possible results.

The Benefits of Using Mulches

Whether landscaping a small garden or a larger public plot, our range of bark mulches can cover every eventuality, ensuring that, no matter the project, we can meet both the requirements and budget of the professional landscaper.

For the professional, mulches are the perfect way to offset a recently landscaped space. Aside from the immediate aesthetic value to the newly landscaped area, mulches form an important layer of protection for flowers and plant life. In fact, there are several horticultural benefits that bark mulch offers:

- Improving appearance
- Moisture retention
- Weed control
- Protection against inclement weather

SOFT LANDSCAPING

Lightweight Roof Soils

The AHS Lightweight Roof Topsoil is a high quality, lightweight loamy sand topsoil. Blending selected sands and quarried subsoil with PAS 100 compliant compost, this Lightweight Roof Topsoil is fully compliant with NHBC's 2020 contamination regulations.

Containing 10mm screened particles with a pH range of 8-8.5 and a typical bulk density of 1000kg/m³, our Lightweight Roof Topsoil has a sandy loam texture that improves handling, even in adverse weather conditions.

Lightweight Extensive Roof Topsoil...19

Lightweight Intensive Roof Topsoil....19

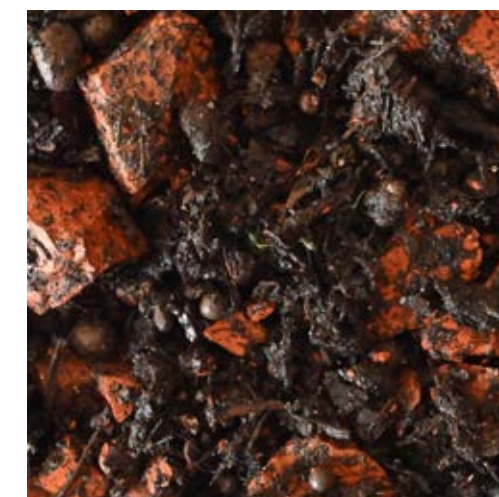

Lightweight Extensive Roof Topsoil

PRODUCT DETAILS

The AHS EXL1 Lightweight Extensive green roof substrate mixture is extremely versatile and is able to support a wide variety of plants across a range of climates.

Its relatively low bulk density allows it to be installed as an extensive option on most roofs. It is also an environmentally friendly product, composed entirely of recycled material. This Lightweight Roof Topsoil's sandy loam texture improves handling, even in adverse weather conditions.

This Extensive substrate is designed for the planting of sedum schemes. It should be laid at a minimum depth of 80mm and directly on to a drainage board. Extensive Green Roof Substrate meets and exceeds all present G.R.O. guidelines.

Lightweight Intensive Roof Topsoil

PRODUCT DETAILS

The AHS INL1 Lightweight Intensive is a blend of 4-10mm LECA (lightweight expanded clay) and selected materials that has been designed to contain a greater proportion of organic matter and finer sand particles. This allows the substrate to retain more moisture for longer periods of time but is free draining, as well as providing extra nutrition for plants.

Ideal for intensive green roof installations, balcony planting and podiums, this substrate provides a stable growing medium for a wide variety of plants, including green roof lawns, shrubs and trees. This Lightweight Roof Topsoil's sandy loam texture improves handling, even in adverse weather conditions.

Laying New Turf Autumn into Winter

As the season turns from autumn to winter, this is the ideal time of year to lay new turf. Surprising, we know, but it really is the way forward – and here's why...

1. Heavy soil can be a pain to work with, but a well-prepared base makes life so much easier.
2. Using the right machinery makes a lot of difference – make sure you are using the correct machine for the job, so you don't create a bog!
3. The turf is less likely to burn or be stressed during the laying process.
4. Less water will be used during the initial process, as the turf and soil beneath will already be holding much more than during the summer period.
5. Much better for the wildlife around the area – birds and animals won't be nesting, and you won't be disturbing pollinating bees. Keep an eye out just in case of visitors, but generally this is a much better idea than spring or summer turfing jobs.
6. Any drainage issues can easily be spotted and fixed.
7. Most trees and plants are dormant during this time of year.
8. The turf has more time to develop and form strong roots.
9. Less/no mowing until spring.
10. Clients are less likely to want to get out in the garden and walk over freshly laid turf.

AHS Turf is ideal for all your turf projects, for everything from lawns to football pitches, so please **contact our sales team** today for further information.

Rootzones

AHS Rootzone products have been the professional's choice for greenskeepers, groundskeepers and the landscape industry for over 25 years.

The AHS GPB Rootzone is a cost-effective top dressing for all sorts of recreational uses, including sports surface construction, winter sports pitches, outfields and golf courses. AHS GPB Rootzone is high quality, great value and the blend ratios can be customised depending on your project.

AHS Tree Sand, meanwhile, encourages healthy tree growth in urban areas. Its blend of washed and graded silica with PAS 100 organic compost encourages oxygen and moisture to the root zone. With all AHS landscape products, we offer quality and value at the right price – all in quantities to suit you. Speak to a member of our sales team today to get started.

All-Purpose Natural Compost - Peat Free

PRODUCT DETAILS

All-Purpose Natural Compost is an environmentally friendly all-rounder product, suitable for indoor plants and outdoors in your garden. It can be used for sowing seeds, rooting cuttings and filling pots, hanging baskets and tubs. All-Purpose Natural Compost is based on premium quality ingredients, enriched with naturally occurring nutrients and balanced fertiliser levels to ensure healthy and vigorous plants at all stages of growth and under a variety of situations, for use all year round.

This product is free from peat, which is an increasingly rare natural resource. Peat bogs are an invaluable habitat for flora and fauna and an important store of carbon – destroying them to make garden compost contributes to battling climate change.

USES

- Fertiliser to encourage healthy growth
- Gives plants and seeds a great start when sowed
- Allows flowers and vegetables to flourish and grow

AVAILABLE IN

John Innes No.1 Compost

PRODUCT DETAILS

AHS is pleased to supply the Bord na Móna range of composts and growing media.

Bord na Móna Growise John Innes No.1 Compost is ideal for growing most types of young plants, such as seedlings and rooted cuttings, in seed trays and pots. It contains carefully balanced nutrients to encourage strong roots and healthy growth. Our compost also retains moisture well during dry periods, which reduces time spent and frequency of watering.

Bord na Móna Growise John Innes No.1 Compost is carefully balanced to meet the nutritional needs at this growth stage.

USE FOR

- Transplanting seedlings
- Newly rooted cuttings
- Potting on

AVAILABLE IN

John Innes No.3 Compost

PRODUCT DETAILS

AHS is pleased to supply the Bord na Móna range of composts and growing media.

Bord na Móna Growise John Innes No.3 Compost is ideal for final planting of larger and more mature plants and vegetables into larger containers and flower beds. It contains the traditional John Innes No.3 mixture with a higher nutrient content for stronger plants.

Bord na Móna Growise John Innes No.3 Compost is carefully balanced to meet the nutritional needs at this growth stage and for final potting of mature plants.

FEATURES

- Established containerised plants
- Final potting
- Top dressing

AVAILABLE IN

John Innes No.2 Compost

PRODUCT DETAILS

AHS is pleased to supply the Bord na Móna range of composts and growing media.

Bord na Móna Growise John Innes No.2 Compost is a traditional mixture of loam, Irish peat and grit with balanced nutrients to ensure healthy growth and excellent moisture retention. It is ideal for potting on more established flowers and vegetables into larger pots and containers.

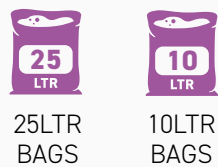

Bord na Móna Growise John Innes No.2 Compost is carefully balanced to meet the nutritional needs at this growth stage.

USE FOR

- Re-potting house plants
- Potting on young plants
- Medium-sized pots

AVAILABLE IN

Enriched Topsoil

PRODUCT DETAILS

AHS are proud to work in partnership with Happy Compost to sell their 100% peat-free Enriched Topsoil.

This nutrient Enriched Topsoil is perfect if your existing soil is damaged or of poor quality. It even works just as well without other soil to mix it with! Lawns will become lush and raised beds will flourish with this free-draining topsoil.

Our Enriched Topsoil is a wonderful soil conditioner; it invigorates as well as restoring all the natural goodness.

FEATURES

- Raised beds
- Replacing soil in old borders
- Lawns
- Landscaping

Mushroom Compost

PRODUCT DETAILS

AHS are proud to have been supplying the UK landscape industry with bark and woodchip for more than 25 years. AHS Mushroom Compost is a recycled by-product of the mushroom growing industry, containing a blend of straw and animal manure. Spent Mushroom Compost will improve soil structure by adding organic matter, increasing available nutrient levels and generally benefitting soil fertility. It is not suitable for lime-hating plants such as camellias, azaleas, rhododendrons and heathers.

FEATURES

- Friable, and easy to spread
- Increases your soil's physical structure
- Blended agricultural straw and animal manure
- 100% natural product and contains no additives or colouring
- Increases the level of organic material in your soil
- Organic Matter: 66%
- pH Level: 6.5 -7.0
- Total Nitrogen: 2.4%
- Free of all foreign matter*

*While all practical measures are taken to remove foreign matter such as metal, glass and plastic, we cannot guarantee the complete absence of all extraneous material. The total amount will not exceed 0.2% by weight.

PAS100 Organic Green Compost

PRODUCT DETAILS

AHS are proud to have been supplying the UK landscape industry with bark and woodchip for more than 25 years. Organic Green Compost is our peat-free general purpose tree and shrub planting compost. Ideal for most applications where the benefits of adding nutrients and structure to the soil is required. Acts as a natural slow release fertiliser, allowing the plants access to a continued source of nutrients, thus reducing the need to fertilise. Can also be used as an outstanding general purpose soil improver. Dark brown/black in colour with the feel and consistency of soil. All of our Organic Green Compost complies to the PAS100 certification.

FEATURES

- 95% of particles fall within a 0-10mm range
- Adheres to PAS100
- pH range of 7.0 to 8.5
- Helps prevent moisture loss
- Improves drainage
- Promotes healthy and strong root growth
- Mix 3 parts soil to 1 part Organic Green Compost for tree and shrub planting.

Farmyard Manure

PRODUCT DETAILS

AHS are proud to have been supplying the UK landscape industry with bark and woodchip for more than 25 years. AHS Farmyard Manure is simply that — a farmyard manure that is a nutrient rich soil improver, mixed into depleted or poor soil to improve the vital nutrients available to promote healthy plant growth.

FEATURES

- Produced from cattle bedding material
- Increases your soil's physical structure
- Composted in rows for a minimum of 8 weeks
- 100% natural product and contains no additives or colouring
- Moisture content is in the range of 40 to 60% (green weight basis)
- 95% of particles fall within a 0-25mm range
- pH range of 7.0 to 8.5
- Weight/volume ratio is normally in the range of 350 to 500kg/m³
- Free of all foreign matter*

Wildflower Meadow Turf Matting

The AHS Wildflower Meadow Turf Matting is a quick, easy and eco-friendly way to get wildflowers established in a domestic garden, living green roof or commercial landscaping project.

Each product in the range is low-maintenance and has been developed with specific needs in mind – from low-light, slopes, flooded and even hard to reach areas. What's more, every sheet

of Wildflower Meadow Turf Matting is biodiverse and pollinator-friendly, ensuring food and nectar for local wildlife and insects.

Birds & Bees Meadow Turf Matting

PRODUCT DETAILS

AHS Birds & Bees Meadow TurfMat is a mix of 41 native British wildflowers that will encourage a wide variety of wildlife into your garden. Besides being a joy to share your space with, AHS Birds & Bees Meadow TurfMat has many features to actively support biodiversity.

It has a long flowering period, supplying pollen and nectar for bees, butterflies, hoverflies and moths all through the spring and summer months and well into autumn, too. As a source of food for caterpillars, it plays a vital part in butterfly and moth lifecycles, producing autumn seed heads and a ready supply of insects and larvae for birds. For the human visitors to the garden, there are colourful flowers and the fascination of watching wild creatures going about their everyday lives.

AHS Birds & Bees Meadow TurfMat will change appearance from year-to-year because the balance of plant species is affected by weather, soil type and management. AHS Birds & Bees Meadow TurfMat contains mostly perennial plant species but annual and bi-annuals are included, too. These may not appear every year.

Each roll of AHS Birds & Bees Meadow TurfMat covers 1 square metre of prepared soil and can be quite heavy. We recommend having two people to install it.

SPECIFICATIONS

- Flowering time, March – September (depending on local weather conditions)
- Can be installed at any time of year
- Install it once and the plants will grow back year after year (as long as the conditions are right)
- 100% native wildflowers.

Birds & Bees Floral Focus

PRODUCT DETAILS

AHS Birds & Bees Floral Focus Meadow TurfMat has 41 different flowering species in the seed mix and no grass; it's a cacophony of colour.

A truly colourful blend of wildflower species that will be irresistible to butterflies, bees, moths and hoverflies, AHS Birds & Bees Floral Focus Meadow TurfMat is a pollinator paradise and when in full bloom, it is a truly joyous mix of vibrant colours. And as an added bonus, most of the plant species are perennial.

AHS Birds & Bees Floral Focus Meadow TurfMat has stunning flower varieties in shades of yellow, white, blue, pink and purple. It has a long flowering period to support pollinators from spring through to autumn. It will help suppress annual weed seeds already in your soil and stops weeds from germinating.

It is very easy to install and care for. Simply unroll on to prepared soil (or green roof substrate) and keep well-watered until the roots are established. Your AHS Birds & Bees Floral Focus Meadow TurfMat will adapt to the conditions in your garden and to the weather, which means it will bring a different display every single year.

AHS Birds & Bees Floral Focus Meadow TurfMat is grown outdoors in a wildlife-friendly plant nursery. Birds, insects and other creatures are actively encouraged to share the benefits of the plants as they grow. Pesticides and weedkillers are not usually used in production, which means that while there is no grass sown in AHS Birds & Bees Floral Focus Meadow TurfMat, from time to time, seeds will be dropped by birds. Any seen are weeded out, but occasionally one or two will be missed. AHS Birds & Bees Floral Focus Meadow TurfMat may not be entirely grass free. The good news is that the growing medium used makes it very easy to pluck out any unwanted plants that you see.

SPECIFICATIONS

- Cut back once a year – no other maintenance required
- Suitable for green roofing AND ground applications
- A vibrant mix of perennial, annual and bi-annual plants for sustainability and lower maintenance
- Depending on soil type and local weather, expect to see flowers between March and September
- 100% native wildflowers.

SuDS & Slopes Meadow Turf Matting

PRODUCT DETAILS

AHS SuDS & Slopes Meadow TurfMat is a blend of 34 native wildflowers and grasses that enjoy a low maintenance care regime. Strongly rooted grasses aid soil stabilisation, while flowering plants bring an extra layer of attractiveness. Suitable for an outdoor space that's hard to maintain, AHS SuDS & Slopes Meadow TurfMat is for all of those hard to reach places that still need to look beautiful.

Ideal for a slopes, banks, damp soils and the margins of ponds, streams or 'Sustainable Urban Drainage Systems' (SuDS), AHS SuDS & Slopes Meadow TurfMat offers a real boost to biodiversity. Insects, amphibians, small mammals and birds truly appreciate this wonderful source of food and shelter. As it needs no chemical treatments, artificial fertilisers or frequent cutting, it creates a wonderful wildlife habitat.

With perennial plants there is no need to overseed, repopulate or replant (unless you want to). It is very easy to install – the ground stabilising blanket is pre-populated with living plants. Simply unroll, peg down, water and walk away. Keep irrigated until plants are well established. AHS SuDS & Slopes Meadow TurfMat is quick to establish. The combination of the matting system and choice of vigorous rooting plants will immediately start to stabilise soil on banks and slopes and there is a high proportion of flowering plants compared with rush or sedge-based stabilisation solutions.

AHS SuDS & Slopes Meadow TurfMat is mown before despatch to minimise damage to plants. It will not be in flower when it is delivered. A standard roll of AHS SuDS & Slopes Meadow TurfMat covers 1 square metre of prepared soil and weighs up to 25kg – we recommend having two people to install it.

SPECIFICATIONS

- Flowering time is May – July (depending on local weather conditions)
- Changes appearance from year to year
- The species mix is influenced by microclimate, weather conditions and the creatures that visit regularly
- A truly biodiverse and adaptable product
- 50% native grasses
- 50% native wildflowers.

Traditional Meadow Turf Matting

PRODUCT DETAILS

AHS Traditional Mix Meadow TurfMat is a blend of 31 native wildflowers and 3 grasses typically found in an old-fashioned hay meadow.

Ideal for a sunny spot where a low maintenance and lots of biodiversity can combine to create a relaxed feel. Prefer a more manicured look? Keeping the edges trimmed and mowing paths through your AHS Traditional Mix Meadow TurfMat results in a more formal appearance.

The majority of plant species in AHS Traditional Mix Meadow TurfMat are perennial, so in the right environment it ensures they will grow back year after year.

AHS Traditional Mix Meadow TurfMat is mown before despatch to minimise damage to plants. It will not be in flower when it is delivered. For flowers in its first season, install AHS Traditional Mix Meadow Turfmat before the end of March to allow plants to establish.

A standard roll of AHS Traditional Mix Meadow TurfMat covers 1 square metre of prepared soil and weights up to 25kg. We recommend having two people to install it. The balance of plant species is affected by soil type, management, pollinator populations and local climatic conditions.

SPECIFICATIONS

- Flowering time, May – July (depending on local weather conditions)
- Ideal for both low maintenance and more formal settings
- Changes appearance from year to year
- 20% native grasses
- 80% native wildflowers.

Cottage Garden Meadow Turf Matting

PRODUCT DETAILS

AHS Cottage Garden Mix Meadow TurfMat is a beautiful combination of native wildflowers and grasses to create a vibrant and bee-friendly cottage garden. A handy garden design tip is to lay the AHS Cottage Garden Mix Meadow TurfMat on top of spring and summer flowering bulbs for an even longer flowering period.

AHS Cottage Garden Mix Meadow TurfMat is mainly created using perennial plant species. The mix also includes some annual and bi-annual flowering species. Some to give a pop of colour while the perennials are blooming and some just because of their sheer beauty.

You can install AHS Cottage Garden Mix Meadow TurfMat all year round. For a burst of colour in time for summer, we suggest that you lay it before the end of March to allow plants to establish.

A roll of AHS Cottage Garden Mix Meadow TurfMat covers 1 square metre of prepared soil. It can be heavy, especially when it's wet, so it's a good idea to get some help when manoeuvring and laying it.

AHS Cottage Garden Mix Meadow TurfMat can look different depending on the look of your project or future maintenance. The balance of plant species and the flowering time will be different in every single garden, giving you endless possibilities! However, it can also depend on soil type, weather conditions, pollinator populations and management style. Simply, unroll on to prepared soil, ensuring the roots have contact with the ground, water it and keep the soil moist until the plants are well established.

SPECIFICATIONS

- Great in deep planters, raised beds, flower borders or as an alternative to your original lawn
- Adaptable to anything but the most acidic or alkaline soils
- Easy maintenance
- Flowering time is late spring until early autumn
- 5% native grasses
- 95% flowering plants.

Heritage Mix Meadow Turf Matting

PRODUCT DETAILS

AHS Heritage Mix Meadow TurfMat really does take biodiversity to a whole new level. With over 20 beautiful wildflower species in the mix, you will be sure to see a varied and colourful display year after year.

The 22 species of UK native wildflowers and grasses in AHS Heritage Mix Meadow TurfMat have proved to us that they adapt well to growing in shallow, poor nutrient soils with very little human intervention.

AHS Heritage Mix Meadow TurfMat was originally developed to meet the demand for a quick-to-install green roofing material with instant plant coverage. It does that job admirably, however, we rather like the way it happily brings a splash of colour to gardens – and so do the butterflies, moths and bees!

Most of the plant species in AHS Heritage Mix Meadow TurfMat are perennial. That means if they are happy on your roof or in your garden, they will grow back year after year. Each of the species will respond differently to soil type, local weather conditions and care regimes.

Your AHS Heritage Mix Meadow TurfMat will be mown before harvest so that plants are not damaged during transportation. The flowering plants will not be blooming when it is delivered. Depending upon the time of year, it can take a few weeks for AHS Heritage Mix Meadow TurfMat to establish, grow and start blooming. Although AHS Heritage Mix Meadow TurfMat can be installed at any time of year, if you would like it to flower in its first summer we recommend installation before the end of March. Each piece of AHS Heritage Mix Meadow TurfMat covers 1 square metre. If installing on a roof, you may need mechanical lifting gear as the rolls can be quite heavy.

SPECIFICATIONS

- Ideal for rooftop applications
- Flowering time, March – October (depending on local weather conditions)
- 10% mixed native grasses
- 90% native wildflowers.

Species Rich Meadow Turf Matting

PRODUCT DETAILS

AHS Species Rich Lawn Meadow TurfMat is hardwearing, incredibly easy to care for and a real asset to biodiversity.

A blend of 12 species of slow growing grasses with 23 types of colourful pollinator-friendly native perennial plants. The result is a multi-coloured carpet of plants just right for relaxing or playing on.

AHS Species Rich Lawn Meadow TurfMat only needs mowing every other week, but it won't grow to much more than ankle height and was specially designed for a relaxed maintenance regime.

The specially selected grasses ensure full coverage all year round – even in wintertime when the flowering plants are asleep. As for hot dry summers, AHS Species Rich Lawn Meadow TurfMat will keep its colour for longer than a standard grass lawn and will recover from drought much quicker.

Install AHS Species Rich Lawn Meadow TurfMat just like standard lawn turf. It needs to be laid on to prepared soil. Unlike most types of AHS Meadow TurfMat, Species Rich Lawn can tolerate slightly more nutrient rich soils, but please keep your new lawn watered until the roots are well established.

SPECIFICATIONS

- Low maintenance
- Ideal for smaller budget projects
- 80% slow growing grasses
- 20% native wildflowers.

Woodland Shade Mix Meadow Turf Matting

PRODUCT DETAILS

AHS Woodland Shade Mix Meadow TurfMat is a blend of 35 native wildflowers and 3 grasses typically found growing in woodland margins and hedgerows. AHS Woodland Shade Mix Meadow TurfMat will bring a splash of colour and serenity into your life along with the knowledge that you are providing valuable wildlife habitat.

All but one of the plant species in AHS Woodland Shade Mix Meadow TurfMat are perennial. That means that you will be able to enjoy them every year without replanting or reseeding. AHS Woodland Shade Mix Meadow TurfMat changes appearance every year with each plant species in the seedmix responding differently to weather and, of course, we get different weather every year.

Although any type of AHS Woodland Shade Mix Meadow TurfMat can be installed at any time of year, autumn is a great time of year to install AHS Woodland Shade Mix Meadow TurfMat. That way, the plants can root in over winter and be ready to bloom in early spring.

Each piece of AHS Woodland Shade Mix Meadow TurfMat will cover 1 square metre of prepared soil. With a saturated weight of up to 20kg/m², it's definitely better for AHS Woodland Shade Mix Meadow TurfMat to be handled by two people than by a lone gardener.

SPECIFICATIONS

- Ideal for tricky spots where garden flowers flounder
- Not suitable for very deep shade
- Flowering time, April – October (depending on local weather conditions)
- Strongest flush of flowers in late spring
- 30% native grasses
- 70% native wildflowers.

The benefits of incorporating bark into your landscape projects

8-35mm Contact Ornamental Bark provides outstanding organic weed suppression by reducing the need for expensive manual or chemical control on all planting schemes.

It is durable, long-lasting and free from pathogens, pests and weed seeds.

It creates an insulating layer throughout the winter months, helping to protect root structures from the damage associated with frozen ground.

Our springs and summers are getting hotter and during these periods, 8-35mm Contact Ornamental Bark helps to preserve moisture levels in soil, which also helps to reduce stress levels and plant losses. It's a totally natural way to reduce the frequency of manual watering, therefore, helping to preserve valuable water supplies.

Bark provides a hostile living environment for pests.

And, it provides natural organic matter to improve soil structure.

Wildflower Seeds

AHS supplies a huge selection of wildflower seed mixtures, each formulated to recreate a particular habitat.

All of our mixtures are guaranteed UK native and hold the Royal Horticultural Society (RHS) Perfect for Pollinators mark, supporting the wide variety of pollinating insects.

So, whether you're looking to create a wildflower meadow or area as part of a restoration project, or as part of a new scheme, we have the perfect wildflower mix for you.

Hard Landscaping

Hard landscaping, by definition, is the use of hard materials in your landscaping scheme.

The opportunities to add exciting elements to your garden are endless. These can be anything from sleepers laid as a pathway or attractive water features using our decorative aggregates.

Other possibilities are ponds, pergolas, walls, outdoor furniture and children's play areas. Why not take a look at our range of hard landscaping products and let your imagination go wild!

Dura SedumMats

48

The new range of AHS Dura SedumMats are a quick and easy alternative to grass lawns and green roofs in domestic and commercial landscaping projects.

Each product in the range offers unique combinations of native plants, all of which are low-maintenance and eco-friendly. No mowing, pesticides or fertilisers required.

AHS Dura SedumMats provide quality and coverage at the right price – all in quantities to suit you. Speak to a member of our sales team today to get started.

Dura SedumMat

PRODUCT DETAILS

AHS Dura SedumMat contains everything you need to create a beautiful and delightful ornamental ground cover, which flowers from April to the end of October.

It's a truly stunning and very low maintenance alternative to a grass lawn. The foliage of every AHS Dura SedumMat is evergreen, beautifully textured and full of interest all year round.

AHS Dura SedumMat is great for a sunny spot and is especially useful where the soil is very dry – or even non-existent. This means that you can create a luscious and beautiful area of foliage almost anywhere, bringing that space to life. AHS Dura SedumMat is delivered with at least 95% plant coverage, so you can rest assured that the finished project will look outstanding. All you need to do is unroll them onto a prepared surface and give them a good watering until established.

AHS Dura SedumMat is seeded with up to 18 different types of sedum, meaning that you get a wonderful mix of foliage to enjoy. Plant species are chosen for their disease resistance, drought tolerance, long flowering period and undeniable good looks, meaning that you will always get the best possible results.

AHS Dura SedumMat is great for sloping banks or for disguising manhole covers (the mat can be moved to allow access). Sedums are drought tolerant and will only need an occasional watering during long spells of dry weather. Other than that, the only maintenance needed is an application of a specialist sedum feed every spring.

SPECIFICATIONS

- Flowering time, April – September (depending on local weather conditions)
- Height when fully grown is generally around 15cm but can vary
- Plants are perennial and frost hardy down to around -20°C
- Can be installed at any time of year
- Please do not install directly onto soil.

49

Dura SedumMat Flat Roof

PRODUCT DETAILS

AHS Dura SedumMat Flat Roof comes with everything you need to turn your standard, dull space into a delightful green roof, full of plants and flowers.

Green Roofing is becoming more and more mainstream as architects, garden designers, property developers and householders work harder to improve eco-efficiency and combat the effects of climate change. There are a plethora of benefits associated with using AHS Dura SedumMat Flat Roof, not least that it creates a real talking point.

AHS Dura SedumMat Flat Roof is grown out of doors in the UK, so it has a low carbon footprint and is well adapted to our climate. There's a lovely mix of plant species and it flowers merrily for at least 6 months of the year. Sedums plants are very easy to care for. Being succulent plants, they cope well with drought conditions and once established will only need a very occasional watering even in extremely dry weather. Feeding is important though. Please be sure to apply a specialist sedum feed every spring.

To utilise AHS Dura SedumMat Flat Roof, your roof must have a load bearing capacity of at least 120kg per square metre. Please note that this includes the weight of live loading, such as a person walking on the roof in order to install the flat green roof or carry out maintenance.

SPECIFICATIONS

- Flowering time, April to September (depending on local weather conditions)
- Plants grow to a height of approximately 15cm but can vary
- Generally frost hardy to -20°C
- Perennial plants will grow back every year
- Plants will not be in flower when AHS Dura SedumMat Flat Roof is delivered
- Can be installed at any time of year
- Changes appearance from year to year as it adapts to local weather conditions and management styles.

Dura SedumMat Pitched Roof

PRODUCT DETAILS

AHS Dura SedumMat Pitched Roof is designed for use on roofs with a slope of 3-20°. If you have a flat roof with a slope of 3° or less, please see AHS Dura SedumMat Flat Roof.

More than just a fad or decorative novelty, an AHS Dura SedumMat Pitched Roof provides insulation, helps prevent flooding, filters pollutants from the air, absorbs noise and provides food and shelter for a vast variety of wildlife.

AHS Dura SedumMat Pitched Roof is seeded with up to 17 different types of sedum, which has been nurtured outdoors for at least 9-12 months. We ensure that every single plant is strong enough to dispatch to you, ensuring the best quality sedum mats for your green roofs. Each plant species is chosen for their disease resistance, drought tolerance, long flowering period and enviable good looks.

AHS Dura SedumMat Pitched Roof comes with sedums that are drought-tolerant, meaning that they only need to be watered occasionally during extended periods of dry weather. On top of this, they are all low maintenance, only requiring a specialist sedum feed every spring, unless your roof is pitched at a steep angle or exposed to drying wind.

For roofs with a pitch of 10° or more, we strongly recommend installing an irrigation system and applying feed in early spring and early summer.

Please ensure that your roof is suitable for AHS Dura SedumMat Pitched Roof. It must be able to carry a weight of 120kg per square metre (this figure includes 'live loading', so a coating of snow or a person walking on the roof will not compromise the building structure).

SPECIFICATIONS

- Flowering time, April to September (depending on local weather conditions)
- Height when fully grown is generally around 15cm but can vary
- Plants are perennial and frost hardy down to around -20°C
- They will not be in flower when delivered
- Install at any time of year
- The balance of plant species is affected by soil type, management, pollinator populations and local climatic conditions, so please expect changes in appearance from year to year.

Grass Seed

At AHS, we know that good quality lawns start with good quality grass seed. That's why we've hand-picked the best specialist grass seed the landscaping industry has to offer.

Every project is different. So, whether you're tackling sports pitches, golf courses, parks, utility areas, estates or more domestic settings, AHS stocks a range of great value and versatile grass seed products to suit your needs. The AHS grass seed range caters for

all-purpose, economical general purpose grass areas; turf ryegrass blends for outfields, recreation areas, plus football, rugby and hockey pitches; grass verges, central reservations, slopes and embankments; tolerant turf in shaded woodland areas and lots more!

DuraDOT Grass Seed

PRODUCT DETAILS

AHS DuraDOT Grass Seed has been designed as a superb mixture for road verges, central reservations and bridgeworks.

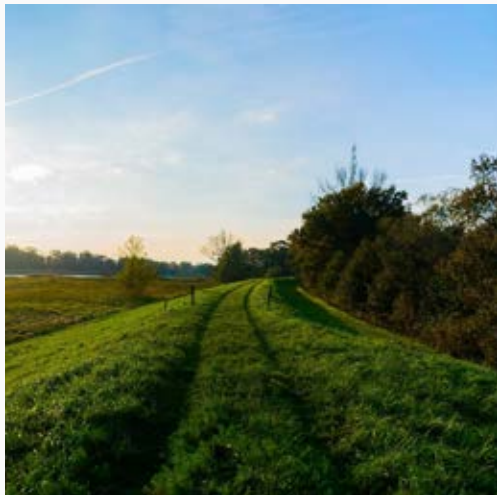

It is a fast-establishing mixture that offers drought tolerance and soil stability on slopes and embankments. It also provides high levels of tolerance to salt spray and exhaust fumes, to ensure a quickly established area that can give cover and support to native creatures.

USE FOR

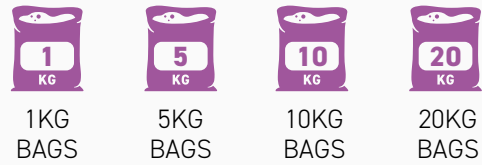

All highway, road and footpath verges, central reservations and bridgeworks, slopes and embankments.

MIXTURE

30% Ridu Hard Fescue / 25% Esquire Perennial Rye Grass / 20% Maxima Strong Creeping Red Fescue / 10% Highland Bent / 10% Sunbeam Smooth Stalked Meadow Grass / 5% Rivendel Small Leaved Clover.

AVAILABLE IN

DuraFairway & Outfield Grass Seed

PRODUCT DETAILS

AHS DuraFairway & Outfield Grass Seed is a mix of fescues and bent grasses that creates a fine appearance. The addition of Meadow Fescue provides a tough surface, perfect for fairways and cricket outfields.

USE FOR

Golf fairways, cricket outfields and light use recreation grounds.

MIXTURE

25% Samanta Slender Creeping Red Fescue / 35% Maxima Strong Creeping Red Fescue / 25% Trophy Chewings Fescue / 10% Miracle Smooth Stalked Meadow Grass / 5% Highland Bent.

AVAILABLE IN

DuraDrought Tolerant Grass Seed

PRODUCT DETAILS

AHS DuraDrought Tolerant Grass Seed has been mixed to give a 100% fescue mix that maintains a green sward in dry and drought susceptible conditions, but as with all plants and grasses it won't live in a desert!

USE FOR

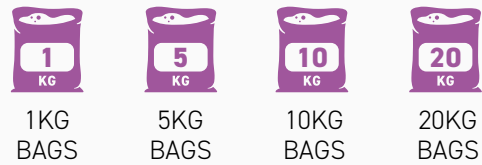

Areas susceptible to drought and dry conditions.

MIXTURE

40% Chewings Fescue / 35% Sheep's Fescue / 25% Creeping Red Fescue.

AVAILABLE IN

DuraFine Lawn Grass Seed

PRODUCT DETAILS

AHS DuraFine Lawn Grass Seed has been mixed to give a high-quality lawn mixture that is fine in appearance with the inclusion of bent grass and fescues, which provide excellent cover. Suitable for formal lawns and high-quality landscaping.

USE FOR

Formal lawn areas, high-quality landscaped areas.

MIXTURE

70% Maxima Strong Creeping Red Fescue / 25% Trophy Chewings Fescue / 5% Highland Bent.

AVAILABLE IN

DuraGreen Grass Seed

PRODUCT DETAILS

AHS DuraGreen Grass Seed has been created especially to provide an effective solution for general landscaping seeding, while also being eminently suitable for lawns. It is quick to germinate and establishes rapidly.

USE FOR

Ideal for general purpose landscaping and lawns. The mix of rye grass and strong creeping red fescue delivers fast establishment, improved colour, increased drought tolerance and incredible disease resistance, improving performance and reducing management costs.

MIXTURE

50% Maxima Strong Creeping Red Fescue / 25% Esquire Perennial Rye Grass / 25% Double Perennial Rye Grass.

DuraPlay Grass Seed

PRODUCT DETAILS

AHS DuraPlay Grass Seed is a 100% four-way Turf Rye Grass blend, which is superbly suited for over seeding and new seeding from scratch all winter sports pitches, including football, rugby and hockey.

USE FOR

The perfect blend for creating sports playing surfaces such as football, rugby and hockey. It can also be used on cricket outfield, rough areas and recreation grounds.

MIXTURE

100% four-way Turf Ryegrass Blend.

AVAILABLE IN

1KG BAGS 5KG BAGS 10KG BAGS 20KG BAGS

DuraRecreation Grass Seed

PRODUCT DETAILS

AHS DuraRecreation Grass Seed is a versatile mixture that will produce a very hard-wearing sward, with a high shoot density suitable for winter and summer games.

The inclusion of Double Tetraploid Ryegrass delivers fast establishment, which is important for the rapid renovation of worn turf.

USE FOR

Municipal recreation areas and school playing fields.

MIXTURE

30% Esquire Perennial Rye Grass / 30% Fancy Perennial Rye Grass / 30% Maxima Strong Creeping Red Fescue / 10% Tetraploid Amenity Perennial Rye Grass Double.

AVAILABLE IN

DuraRenovation Grass Seed

PRODUCT DETAILS

AHS DuraRenovation Grass Seed is a mixture suitable for most areas of land reclamation, including quarries, open cast mining, spoil heaps and general landfill sites.

The perennial rye grass will quickly establish to act as a nurse crop for the remaining species, which are selected for their excellent tolerance to infertile conditions and areas of environmental stress.

USE FOR

Most land reclamation projects such quarries, open cast mining, old industrial areas and general landfill sites.

MIXTURE

25% Samanta Slender CRF / 20% Reuben's Flattened Meadow Grass / 30% Irondale Late Tet Perennial Rye Grass / 10% Quatro Sheep's Fescue / 2.5% Rivendel Small Leaved White Clover / 2.5% Birdsfoot Trefoil.

AVAILABLE IN

DuraRemediation Grass Seed

PRODUCT DETAILS

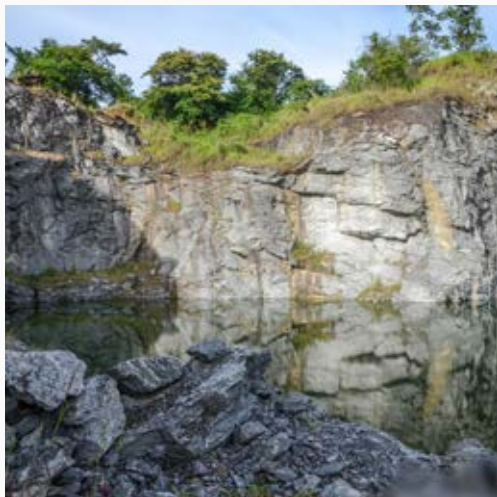

AHS DuraRemediation Grass Seed is a mixture suitable for most areas of land remediation/reclamation, including quarry sites, open cast mine sites, spoil heaps and general landfill sites. The species are selected for their excellent tolerance to infertile conditions and areas of environmental stress.

USE FOR

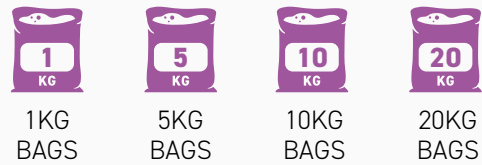

Quarries, landfill and areas that are worn or distressed.

MIXTURE

25% Samanta Slender Creeping Red Fescue / 20% Reuben's Flattened Meadow Grass / 30% Irondale Late Tetraploid / 10% Quatro Sheep's Fescue / 10% Ridu Hard Fescue / 2.5% Rivendel Small Leaved White Clover / 2.5% Birdsfoot Trefoil.

AVAILABLE IN

DuraShade Grass Seed

PRODUCT DETAILS

AHS DuraShade Grass Seed is a blend of top quality non-ryegrasses, designed and mixed to produce an excellent wear tolerant turf under shaded conditions or areas of low light.

USE FOR

Shaded areas under trees or areas with a dense canopy, with low levels of sunlight, drought and poor nutrient levels.

MIXTURE

30% Solo Rough Stalked Meadow Grass / 30% Trophy Chewings Fescue / 25% Samanta Slender Creeping Red Fescue / 10% Ridu Hard Fescue / 5% Highland Bent.

AVAILABLE IN

DuraSlow Grass Seed

PRODUCT DETAILS

AHS DuraSlow Grass Seed is a selection of slow-growing grasses with the aim of creating a low maintenance sward. Ideally suited for use in amenity and green space areas.

USE FOR

All amenity and areas that requires a little maintenance.

MIXTURE

15% Chewings Fescue / 10% Slender Creeping Red Fescue / 50% Strong Creeping Red Fescue / 5% Smooth Stalked Meadow Grass / 15% Hard Fescue / 5% Crested Dogtail.

Why is AHS committed to peat-free products?

Peatlands are carbon rich wetlands that cover up to 12% of the UK land area and 3% of the global land surface. When well-managed and maintained, they have a net cooling effect on climate, reduce flood risk and support biodiversity. Healthy peatlands can reduce the flow of water from the uplands and provide floodplain storage for the lowlands. They also provide essential habitat for many wading birds, rare insects, flora and fauna.

Around 80% of the 3 million hectares of UK peatland has been affected by human activities, including the extraction of peat from lowland bogs for the horticulture industry, forestry channels being dug in the uplands and the draining of the lowlands, resulting in this precious environment hanging in the balance. It is estimated that there are more than 3.2 million tonnes of CO2 being held in the UK peatlands alone and the affect it would have on the climate, if released, is unthinkable.

It takes 1,000 years for 1m of peat to form, so here at AHS we are doing our bit to help save this wonderful piece of natural habitat for the benefit of all, by ensuring that all our composts are absolutely peat-free. Support the continued fightback for UK peatlands by checking out our new Heart of Eden, All-Purpose Natural Compost, which is ethically produced and 100% peat-free!

Golden Cotswold Self-Binding Gravel

AHS is one of the UK's leading specialists and retailers of hard landscaping products. We are proud to say we have been sourcing and supplying the UK's builders, groundworkers and engineers for more than 25 years.

From general or decorative aggregates, sands, paving, gravel, sleepers and sheds, the AHS hard landscaping range has everything you need to transform domestic and commercial outdoor spaces.

So, whatever your project or budget, you can be sure to get quality and value at the right price – all in quantities to suit you. Speak to a member of the AHS sales team today to get started.

Aggregates & Sands

AHS is a trusted supplier of aggregates and sands for hard landscaping and construction projects. Whether you are looking for primary aggregates, recycled aggregates, sands or self-binding gravel, our comprehensive range includes a wealth of quality and sustainable options – all in quantities and prices to suit your budget.

Our Aggregates & Sands range includes primary aggregates, recycled aggregates, sands, self-binding gravels, kiln-dried sands, bulk-bagged primary aggregates and pre-packed primary aggregates. Here at AHS, we see ourselves as a one-stop shop for aggregates and sands. So

whatever you need for your next project, know that it will be competitively priced with fast delivery, nationwide. If you cannot find what you are looking for, a member of the AHS sales team is on-hand to help.

Ballast

PRODUCT DETAILS

20mm Ballast is a single-sized gravel aggregate, blended with sharp sand conforming to the requirements of BS EN 12620: 2013.

Also available as 10mm graded for finer finishes to concrete (uses are the same).

USE FOR

An 'all-in-one' aggregate; combine with cement and water to produce coarse concretes. This product is suitable for:

- Footings
- Foundations
- Setting posts
- Steps and all general concrete mixes

For coarse concrete mixes, use 1 part Ordinary Portland Cement : 6 parts 20mm Ballast.

BULK BAGS

Building Sand

PRODUCT DETAILS

This sand is used within mortar applications. The material is available washed or dry-screened in red, brown, buff or grey colours dependant upon location within the UK and is suitable for small or large scale use.

We are able to supply both washed and dry-screened sands, all of which comply to BS EN 13139:2013.

USE FOR

In combination with cement to produce mortar, for the construction of masonry brick and block work.

Other uses include:

- Bedding cables
- Blinding of sub-bases
- Under pond liners

AVAILABLE IN

Sharp Washed Sand

PRODUCT DETAILS

Sharp Washed Sand is a 0-4mm sand conforming to the requirements of BS EN 12620: 2013. Also known as "concreting sand", "screeding sand" and "compo sand".

Due to the pressure of quarrying sharp washed sand, a recycled option is often available.

USE FOR

As an aggregate combined with cement, shingle and water to produce coarse concretes. This product is suitable for:

- Screeding
- External plastering
- Drainage
- Bedding
- Blinding
- Horticultural uses

6F5 Primary Specification

PRODUCT DETAILS

Crusher run products that are produced to the series 600 earthworks specification. The stone tends to be well-graded and used within the construction of highways, car parks and bulk filling. The products are available in 125mm and 40mm down sizes.

6F5 Recycled (Formerly 6F2 Recycled) is typically used for capping sub formations prior to laying Type 1 or Type 3 sub-base. It is a well-graded material ranging from 125mm to dust.

USE FOR

- Fill material
- Void filling
- Raising levels
- Capping layer

AVAILABLE IN

BULK BAGS

MOT Type 1 Sub-Base

PRODUCT DETAILS

MOT Type 1 Sub-base is a gravel/stone aggregate, blended with fines conforming to the Highway Agency's Specification for Highway Works, Clause 803 (SHW 803).

Also known as GSB TYPE 1 or MOT TYPE 1, this is a granular material with a maximum permitted top size of 63mm, graded down to dust. For environmental and cost reasons, recycled MOT Type 1 is also widely available.

USE FOR

Crushed aggregate from 40mm to dust. Ideal as a sub-base for driveways and paths when compacted, with excellent load bearing properties.

AVAILABLE IN

LOOSE
LOADS

850KG
BULK BAGS

MOT Type 3 Sub-Base

PRODUCT DETAILS

40mm unbound mixture used for sub-base applications as per the Specification for Highway Works, Clause 805. Generally open graded with a reduced amount of fines (not zero fines), which improves drainage when compared with Type 1.

For environmental and cost reasons, recycled MOT Type 3 is also widely available.

USE FOR

Widely used for sports pitches, equestrian arenas, driveways and tennis courts where drain blockage may be an issue and where SUDS (Sustainable Urban Drainage Systems) legislation is imposed.

Also used as a sub-base material in hard standings, haul roads, paths and patios.

BULK BAGS

Shingle

PRODUCT DETAILS

Single-sized gravel aggregates conform to the requirements of BS EN 12620: 2013. Two versions are available: natural and crushed (sometimes called gravel). Available in 10mm, 20mm and 40mm grades.

USE FOR

In combination with cement, sharp sand and water in suitable mix designs to produce concretes for:

- Footings
- Foundations
- Setting posts
- Steps, etc.

May also be used as a top dressing for paths and driveways.

AVAILABLE IN

LOOSE

BULK BAGS

Scalpings

PRODUCT DETAILS

Scalpings are essentially quarry waste available in a range of sizes, including 40mm, 75mm and 100mm (40mm is most common).

They are clay contaminated stones that are removed during a screening process that ensures the quality of larger rocks at the quarry. While the concept of 'quarry waste' may not sound ideal, scalpings are actually the perfect material for evening out the foundations of a project and make a fantastic sub-base material at a lower cost than MOT type 1.

USE FOR

Scalpings are largely used as a sub-base material during the construction of car parks, driveways, pathways and foundations for buildings. Scalpings also work well to fill gaps within an uneven foundation and provide an ideal base for paving and concrete.

AVAILABLE IN

LOOSE
LOADS

BULK BAGS

Hoggin

PRODUCT DETAILS

Hoggin is a compactable ground cover that is composed of a mixture of clay, gravel and sand or granite dust that produces various coloured bound surfaces. It is more commonly seen in the south of England and often used at National Trust properties. The material is aesthetically suited to older properties and is lower maintenance than gravel alone, as it does not need regular raking.

Once laid, the surface is somewhat permeable to water and therefore does not easily hold puddles or generate rapid surface runoff. However, due to diminishing sources and the inconsistent quality, Self-Binding Gravel is becoming a more favourable option.

USE FOR

Woodland pathways, parking areas and increasingly at domestic properties as a low-cost and environmentally friendly alternative to concrete and block paving in paths and driveways.

AVAILABLE IN

BULK BAGS

Pipe Bedding Aggregates

PRODUCT DETAILS

Pipe Bedding is a range of compactable aggregates used to support pipes and ducting. There are several classes of bedding aggregates for drainage, designed to suit all sorts of ground conditions, pipe types and anticipated loadings.

All of the types that AHS supply are free from stones larger than 40mm and lumps of clay greater than 100mm, and they conform to specifications as detailed in BS EN1610 Annex B Table B15.

USE FOR

Supporting and protecting drainage, ducting and service pipes.

Reject Beach (125/40mm)

PRODUCT DETAILS

Reject beach, also known as 125/40mm, is a primary aggregate, generally sourced from sea dredging in the Southern Region. It is an oversize product that can contain stones up to 125mm. It is commonly used for backfill and drainage for construction projects.

Quarried gravel is also available in other parts of the UK.

USE FOR

- Bulk fill
- Large scale drainage
- Raising site levels
- Commercial landscapes

Rock Armour (RipRap)

PRODUCT DETAILS

Rock armour — or RipRap — is an effective solution to protect coastlines and structures from erosion by the sea, rivers, or streams and for maintaining coastlines.

Large boulders interlocked together to form rock revetments can be used to control erosion by armouring the beach face and dissipating wave energy.

USE FOR

Rock Armour is also used to provide effective scour protection to underwater structures and can be used as a natural looking protection to rivers, streams and flood walls.

AVAILABLE IN

Graded Construction Aggregates (SUDs)

PRODUCT DETAILS

AHS supply a range of graded aggregates for infrastructure or engineering projects on time and in compliance with the standards applicable (BS EN12620, BS EN13285 and BS EN13043).

The material is usually crushed limestone or granite with low fines content that forms a hard-wearing and well drained surface when compacted.

Common sizes are 2-6mm, 4-20mm and 10-63mm but other sizes can be supplied to suit individual project requirements.

USE FOR

Used as a free draining sub-base in:

- Equestrian riding arenas
- Parking areas
- Roads
- Paths
- Driveways
- Drainage ditches

APEX Sheds

AHS Apex Dip-Treated Shed

PRODUCT DETAILS

The AHS Apex Dip-Treated Shed is one of our more prominent and popular products. One fundamental reason for it being a bestseller comes from its superior grade tongue and groove shiplap cladding.

Its classic design makes it one of the most popular wooden garden sheds. The cladding, emphasising rigidity and security, comprises of a high quality selected European softwoods, protected with a red cedar water based treatment. This makes the AHS Apex Dip-Treated Shed an excellent and aesthetically pleasing product providing an ideal storage space.

The fully framed roof of the shiplap tongue and groove Apex Shed is covered with a layer of heavy duty green mineral polyester backed felt for further protection. Internally, the ultra strong rounded four corner framework, double in the corners, provides additional structure and strength to the overall garden shed. The well-braced single access door provides more than sufficient access to store large outdoor products, such as barbecues and bicycles.

SPECIFICATIONS

- Taller Apex Shed – 6×4, 7×5, 8×6 (other sizes are available)
- Available with or without windows
- 7ft High @ Centre, 6ft High @ Eaves (approx.)
- Full 12mm FSC/PEFC Tongue & Groove Cladding, inc. Roof & Floor
- Full 40x30mm FSC/PEFC Framing
- 40kg Polyester backed Roofing Felt
- Red Cedar Water Based Treatment
- 12" Galvanised Hinges.

Looking for secure, affordable garden storage? AHS Apex Sheds combine quality with strength and value.

Available in a range of sizes, AHS Apex Sheds are finished in shiplap or tongue and groove cladding. The interlocking boards and the apex roof keep the elements out; while the tanalith wood preservative ensures it will last for up to 10 years from its manufacture date.

AHS Apex Sheds come in a range of sizes, all with 40kg green mineral roofing felt, tongue and grooved roof and floor, and secure, galvanised fixings. Speak to a member of our sales team today to get started or to place a bulk order.

Cambrian Boulders

PRODUCT DETAILS

AHS Cambrian Boulders are arguably the best and most natural looking boulders. These smooth glacial boulders are sized at 150-300mm, and they come in a picturesque blend of grey, brown and cream colour tones, making them a very popular choice in the landscaping industry.

AHS Cambrian Boulders are naturally sourced and can vary from the images shown and from batch-to-batch. Our boulders come crated, but as the individual pieces vary in size, the weight is approximately 1,000kg

USE FOR

- Garden designs
- Pond verges
- Alpine borders
- Rockery gardens

Cotswold Chippings

PRODUCT DETAILS

AHS supplies the ever-popular Cotswold Chipping — a light cream angular chipping, which when wet becomes a darker attractive cream colour.

Our Cotswold Chippings are naturally and sustainably sourced and can, therefore, vary from the images shown. Available in two sizes; 4-10mm or 10-20mm.

Ideally suited to use as a fill material with paving grids, Cotswold Chippings are also widely used as a decorative border mulch, both commercially and residentially.

USE FOR

- Paving grids
- Paths
- Driveways
- Large areas of ground cover
- Decorative borders

Membranes

AHS stocks a range of woven and non-woven membranes, suitable for domestic and commercial construction, landscaping projects and weed control.

Our products include woven ground cover membranes, non-woven geotextile fabric and AHS weed control fabric, which are all available in quantities to suit you. With fast, nationwide delivery,

competitive prices and bulk discounts available, AHS provides quality and service that you can rely on. Speak to a member of the AHS sales team today to discuss your requirements.

Ground Cover_Permatex.....**85**
Non-Woven Geotextile Fabric**85**

Weed Control Landscape Fabric.....**85**

AHS Ground Cover (Permatex)

PRODUCT DETAILS

The AHS Ground Cover (Permatex) is a woven ground cover membrane made from HDPE threads, using the Sulzer technology.

Permatex can be used as both a weed control and a stabilising membrane. This ground cover features a unique ripple-weave technology giving excellent water dispersion, which eliminates puddling, making it ideal for use with growing plants. It's a robust 100g/m2 and can be used in many more applications.

UV treated, Permatex will last an impressive 5-7 years without the need for a mulch and even longer when covered. Available in two options — blue line marked and blue grid marked — to assist with planting layouts.

FEATURES

- Premium quality – one of the best membranes on the market
- Stabilised against UV damage for up to 7 years
- Highly effective, economical solution
- Weight 100g/m2 — heavier than alternative brands.

AHS Non-Woven Geotextile Fabric

PRODUCT DETAILS

The AHS Non-Woven Geotextile membrane can be used to filter and stabilise construction projects. Made from polypropylene fibres, the AHS Non-Woven Geotextile Fabric is ideal for soakaway crate wrap, drainage trenches, under gravel on a driveway or in our porous grid system, Paving Grid. AHS's Non-Woven Geotextile is a versatile membrane. The 4m widths are ideal for large civil projects, such as highway construction, while the 2m widths work well under gravel on domestic drives.

FEATURES

- High tensile strength
- Prevents mixing of construction layers
- CE Certified.

AHS Weed Control Landscape Fabric

PRODUCT DETAILS

AHS Weed Control Landscape Fabric is ideal for flower beds, fruit and vegetable plots, paths and aggregate areas. Made from a spun-bonded membrane, this landscape fabric's innovative design allows air, nutrients and liquids to pass through the soil. AHS Weed Control Landscape Fabric is easy to use. Simply strim vegetation down to ground level and lay it on top.

SPECIFICATIONS

- Available in 1m, 1.5m, 2m, 2.4m and 3m widths
- Available in 10, 12, 14, 15, 20m, 25m, 50m and 100m lengths
- Guaranteed for 15 years when covered with a mulch
- You can also use for aggregating lawns, under decking, patios or artificial grass.

Newt Fencing

86

PRODUCT DETAILS

AHS Newt & Amphibian Fencing is designed to protect and contain amphibians during and after civil engineering projects, such as pipeline construction and road building.

These weather resistant barriers are difficult for reptiles to climb and conform to 'Wildlife Fencing Design Guide' and 'Great Crested Newt Mitigation Guidelines'.

Available in two grades; a heavy duty black woven geotextile, which is guaranteed to last 7 years or a standard polythene membrane, which is guaranteed to last 2-3 years.

USE FOR

- Excluding or containing newts, frogs, snakes and small wildlife
- Temporary/semi-permanent fencing
- Installation on post and rail fencing.

Paving Grid

87

PRODUCT DETAILS

AHS Paving Grid is a permeable paving solution you can rely on. Manufactured using 100% recycled materials, they are designed to work with and support earth, grass and gravel. Available in two sizes; 25mm and 40mm to ensure the perfect product for the job!

AHS Paving Grid is a simple, cost-effective surfacing solution and it's easy to see why: the durable, anti-slip grids are also frost and UV resistant. They are built to last, too – they will neither crack, rot nor splinter – and they can also handle a high load-bearing capacity of 350t/m2.

Once fitted, AHS Paving Grids can be infilled with grass, gravel, sand, earth or stones, making them adaptable to any setting. AHS Paving Grids are ideal for all areas of high usage from foot traffic, vehicular traffic, wheelchairs, animals, bicycles and for creating low-maintenance access roads, parking areas and hard standings.

Unlike other materials, AHS Paving Grids fully support drainage, allowing water to be held for gradual release into the ground, helping to reduce the spread of urban hotspots and flood risk zones.

KEY BENEFITS

- Lightweight and easy to install
- Low maintenance, anti-slip surface
- Guaranteed for 20 years
- Withstands thermal expansion
- For permanent and temporary use
- High load-bearing capacity of up to 359 tonnes/m2
- Frost and UV resistant
- 100% recycled and 100% recyclable.

Puddling Clay

90

PRODUCT DETAILS

AHS Puddling Clay is a soft-to-firm, fissured dark blue to grey silty clay, with occasional fossil fragments found in it.

Puddling clay has been used for hundreds of years as a lining for ponds, canals and reservoirs. It is also used in more modern times for the lining and capping of landfill sites to prevent pollution and leaching. "Puddling" is the process which lines any channel with puddle clay, making a watertight, strong clay base.

Puddling clay was first used on canal systems and remains in use today to maintain them. It was also used on a lot of the reservoirs across Britain and has been used as a core for earth-filled dams. The method of lining puddled clay in a pond is simple and a lot more natural than using flexible pond liners that are not as durable and cheap.

The AHS Puddling Clay conforms to British Standards, can be used for various applications and is approved by the EA and British Waterways. It is also wildlife and eco-friendly.

USE FOR

- Irrigation lakes and pools
- Landfill sites
- Household waste and recycling centres
- General cohesive fill to highway specification
- Embankment works

Why use sustainable timber for our products?

Here at AHS Ltd, not only do we utilise timber from UK forests to reduce the carbon footprint of our products but, through photosynthesis during their lifetime, trees absorb carbon, which is also great for our planet. Even in an unmanaged forest, when a tree dies it decomposes, so the carbon it has stored over its lifetime is released naturally into the air. This makes each tree virtually carbon neutral.

Most people assume that cutting trees down is a bad thing, which is certainly the case with deforestation, but sustainable forestry means the same number of trees or more are planted to replace those felled. And, although every tree absorbs carbon, as young trees grow, they absorb it more rapidly than ageing trees. Approximately one tonne of carbon is stored in every cubic metre of timber. When trees are felled,

the carbon is stored within the timber and with every new tree planted, more carbon is removed from the atmosphere, which is ultimately better for the planet.

Forests are the natural habitat for numerous species of wildlife and insects. Research has shown that well-managed forests can be better for wildlife, rather than leaving dense patches of undisturbed woodlands. They can offer a more balanced environment with wildlife corridors.

Managed forests can help with climate control, soil erosion and minimising the risk of flooding. Altogether, it highlights the need for the end to deforestation and a better understanding of how we can help to maintain our forest habitats for generations to come through effective and sustainable forestry management.

Sleepers

Green Sleepers

PRODUCT DETAILS

AHS Green Sleepers are sustainably sourced and perfect for indoor or outdoor use, for a variety of applications.

Our green FSC®-certified sawn softwood sleepers are versatile, fantastic quality and ideal for both large landscaping schemes and private gardens.

AHS Green Sleepers are available in a number of sizes to complement any project. For general landscaping and garden construction, our sawn softwood sleepers are perfect for most applications such as retaining walls, edging and raised vegetable and flower beds.

They are treated with Tanalith E to provide many years of life (10-15 years). This treatment is water based and forced through hydraulic pressure deep into the structure of the sleeper, not only does it provide a longer life span it helps to protect against insect and fungal attack plus general moisture penetration.

Upon external exposure our green sleepers will gradually mellow over time and turn a wonderful shade of silver grey. This weathering process does not indicate any loss of protection.

As a natural product, each sleeper is unique. This means that there may be colour variations, splits, knots and waness.

USE FOR

- Raised beds
- Planters
- Outdoor or indoor seating
- Raised garden ponds
- Retaining walls
- Lawn edging

FEATURES

- FSC®-certified
- High quality – HC3 treated
- For indoor and outdoor use
- For landscaping and construction
- Long lasting

Brown Sleepers

PRODUCT DETAILS

AHS Brown Sleepers are available in a number of sizes to complement any project. For general landscaping and garden construction, our sawn softwood sleepers are perfect for most applications such as retaining walls, edging and raised vegetable and flower beds.

All our brown sleepers are FSC®-certified sawn softwood sleepers from sustainable and managed sources. They are treated with Tanalith E to provide many years of life (10-15 years) and Tanatone to provide a warm brown colour. The treatment is water based and forced through hydraulic pressure deep into the structure of the sleeper, not only does it provide a longer life span it helps to protect against insect and fungal attack plus general moisture penetration.

Our brown sleepers will gradually mellow over time due to external exposure and turn a lovely dark brown/grey colour. This weathering process does not indicate any loss of protection.

As a natural product, each sleeper is unique. This means that there may be colour variations, splits, knots and waness.

USE FOR

Planed & Bevelled Sleepers (PAR)

PRODUCT DETAILS

The AHS Planed & Bevelled PAR Sleepers have been processed to achieve a smoother surface, with the usually square edges bevelled to achieve a smoother surface. Virtually splinter free, these sleepers are perfect for outdoor dining spaces, patios, seating, children's play areas and schools.

Available in green or brown, our PAR sleepers are FSC®-certified sawn, softwood sleepers which have been pressure treated with Tanalith E wood preservative. This is a water-based wood preservative, which contains copper and proven organic biocides. The treatment ensures the sleepers benefit from long-term protection against fungal and insect attack when used both in and out of contact with the ground, in appropriate applications.

Upon external exposure our green sleepers will gradually mellow over time and turn a wonderful shade of silver grey.

To achieve the rich colour of our brown sleepers, Tanatone 3950 has been added. Our brown sleepers will gradually mellow over time due to external exposure and turn a lovely dark brown/grey colour.

This weathering process does not indicate any loss of protection.

USE FOR

- Children's play areas
- Outdoor or indoor seating
- Raised beds
- Retaining walls
- Sand Pits
- Garden ponds

FEATURES

- FSC®-certified
- High quality – HC3 treated

European Oak Sleepers

PRODUCT DETAILS

AHS European Oak Sleepers are a beautiful hardwood, which will last for years because their natural tannins protect them from all that the Great British weather has to offer!

Our European Oak Sleepers are unseasoned or 'green', which means they have been cut within the last 6 months and are untreated. This natural look is highly sought after for interior design and outdoor landscaping schemes.

All oak sleepers are sourced from managed European Forests according to the principles of sustainable development, maintaining the biodiversity, productivity and regeneration capacity. We only obtain our oak sleepers from respected forests, which adhere to the EU Timber Regulation (EUTR), thus ensuring that the timber used has been legally harvested from a managed source.

USE FOR

- Fire surround or mantel
- Outdoor or indoor seating
- Garden steps
- Fire pits
- Coffee tables
- Raised beds
- Retaining walls

FEATURES

- Long lasting
- Untreated, natural finish
- Sourced from EUTR regulated forests
- Indoor or outdoor use
- For landscaping and construction

AVAILABLE IN

Creating Perfect Paths with AHS Walkway Chips

Whether you are making a route across your garden or through large, wooded areas for a landscaping scheme, it is so easy to create paths with our walkway chips that we thought we'd share a few tips with you.

AHS Walkway Chips are a quick and relatively inexpensive alternative, are perfect for weed suppression and produce a stunning natural looking path.

When laying the walkway chips, if you are not edging the pathway, always ensure that you dig out at least 1" to allow for the chips and ensure they do not spill out. To achieve the best results, use a landscape fabric to help with the weeds. It will also help the walkway chips to last longer.

This wonderful natural product, which is sourced from sustainable forests, will not strip nitrogen from your soil or damage the soil underneath the walkway chips.

For further information, please speak to our knowledgeable sales team today.

Rock Salt

The AHS Rock Salt and De-Icing Salt range can help to clear and prevent snow and ice formation.

It is available in white or brown, conforms to the industry standard BS3247:2011 and can be used across roads, car parks, footpaths and pedestrian areas.

Whether you opt for Rock Salt or De-Icing Salt, all products are available in a range of quantities to suit your needs. Speak to a member of the AHS sales team to discuss your requirements.

Brown Rock Salt	99
White De-Icing Salt.....	99

Brown Rock Salt

PRODUCT DETAILS

The AHS Brown Rock Salt is traditionally known as grit and conforms to BS3247:2011, the British Standard for de-icing salt.

This raw, indigenous product is mined in the UK & Ireland and is typically comprised of 5-8% naturally occurring grit particles (insoluble).

AHS Brown Rock Salt is treated with an anti-caking agent.

White De-Icing Salt

PRODUCT DETAILS

Our AHS White De-Icing Salt conforms to BS3247:2011, the British Standard for de-icing salt. It is a marine salt, harvested from sustainable sources around the Mediterranean Sea.

It is almost 100% pure sodium chloride, meaning every particle plays a part in the de-icing process, making it an efficient winter salt at battling ice and snow.

White De-Icing Salt does not leave behind the same messy residue as traditional brown salt (grit). Perfect for pathways, pavements, playgrounds and commercial estates, where cleanliness is important.

Our White De-Icing Salt is screened and has graded particle sizes for even distribution, which increases pedestrian safety and the working life of the equipment. It is free-flowing and ideal for use in spreaders or by hand.

Golden Cotswold Self-Binding Gravel

PRODUCT DETAILS

AHS Golden Cotswold Self-Binding Gravel is an eco-friendly, hard landscaping option for pathways and tracks. It is versatile, durable and easy to maintain. Once laid and firmed, AHS Self-Binding Gravel creates a solid surface that does not separate like loose chippings.

We believe that our AHS Golden Cotswold Self-Binding Gravel is the perfect solution for those looking for the natural effect of gravel with a firmer and more durable finish. This type of gravel is extremely versatile, easy to lay and maintain. It suits both traditional and modern settings.

AHS Self-Binding Path Gravel is equally attractive in rural or urban environments and is an excellent surface for footpaths, driveways and car parks as its natural setting properties creates a surface that is less susceptible to spreading and separating like loose chippings, resulting in a neat, golden finish. The gravel is graded 14-0mm to give a solid, hardwearing surface when laid.

AHS Self-Binding Gravel is suitable for areas experiencing some vehicular use. Use a thickness of 50mm for paths and 100mm for drives and parking areas.

USE FOR

- Cycle paths
- Areas of pedestrian and vehicular use
- Golf courses
- Heritage environments
- Parks and gardens
- Bridleways
- Large landscaping projects

Play Area Safety Bark

Our sustainably sourced play bark is a safe, attractive alternative to grass in children's play areas.

Our play barks are BS EN 1176 & 1177 compliant, which, when laid correctly, gives children the protection they need should an accident occur, whether in a public park or home play area.

We offer two play barks to suit every budget and scheme. Our 15-60mm Pine Play Area Bark is a wonderful reddy-brown colour with a heady pine odour. Alternatively, our 8-40mm Play Area Bark is designed for surfacing on a budget. A mid-brown colour, this bark still ensures a pleasing finish to any play area.

Our barks are 100% British sourced, non-staining and, with regular raking, play bark can last for years. It is durable in all weather conditions and can also be used for flower beds and borders.

For further information regarding how bark should be laid to achieve critical fall height requirements, please speak to one of our dedicated sales team who will be happy to advise.

Play Area Safety Surfacing

With nearly 30 years' experience supplying Local Authorities, Landscape Contractors and Designers across the UK, AHS Ltd are trusted partners in the provision of play area safety surfacing.

All our products have been tested and approved to BS EN guidelines, including impact absorption and critical fall height (CFH).

Whether you are building a new play area or updating an existing one, our premium products offer a quality finish that will withstand the rigours of endless trampling feet and whatever the British weather throws at it, enabling play all year round.

8-40mm Play Area Bark

PRODUCT DETAILS

The AHS 8-40mm Play Area Bark is an economy playground bark ideal for surfacing on a budget. Produced from mixed conifer bark predominantly of pine in origin, it is mid-brown in colour with a pleasant odour.

FEATURES

- 100% British
- Fines content less than 5%
- 90% of particles range from 8-40mm
- 100% natural product and contains no additives or colouring
- Contains minimal whitewood, normally within 10% (by volume basis)
- Bulk density typically 200-300kg/m3
- Complies with BS EN 1177 industry standard
- Free from methyl bromide, pathogens, pests and weed seeds
- Free of all foreign matter*

*While all practical measures are taken to remove foreign matter such as metal, glass and plastic, we cannot guarantee the complete absence of all extraneous material. The total amount will not exceed 0.2% by weight.

APPLICATION RATE

The appropriate depth of Play Bark depends on the critical fall height required, so please discuss with our sales team.

PLAY AREA SAFETY SURFACING

Play Area Shock Pad

109

PRODUCT DETAILS

The AHS range of PlayPads is designed to protect playing children against heavy head injuries. PlayPad is installed under suitable play surfaces and makes it an impact absorbing surface. For a prompt and economical installation, the PlayPad is supplied as interlocking panels — 2.25m x 0.90m (2.025m² per piece).

Traditionally natural turf or loose materials, like woodchips, bark or even sand, are used for impact absorption at playgrounds. However, the quality of these materials is often influenced by weather and pollution.

AHS PlayPad shock pads can be installed easily on a sand or crushed stone sub-base, or an (existing) concrete sub-base. Due to the very high permeability, the surface will remain 'dry' during and after heavy rainfall.

Contact our sales team today to assist with your next play area installation.

Planed & Bevelled Sleepers

110

Planed and bevelled sleepers, also referred to as planed all round (PAR), are virtually splinter free.

The perfect choice for using in children's play areas and schools, while also suitable for parks and public landscaping. Due to their smoother finish, planed and bevelled sleepers are also ideal for creating outdoor seating and furniture.

Brown Planed & Bevelled Sleepers... **111**

Green Planed & Bevelled Sleepers.... **111**

Brown Planed & Bevelled Sleepers (PAR)

PRODUCT DETAILS

The AHS PAR Brown sleepers have been processed to achieve a smoother surface, with the square edges bevelled to achieve a smoother surface. Virtually splinter free, these sleepers are perfect for children's play areas and schools.

Our FSC®-certified sawn softwood sleepers have been pressure treated with Tanalith E wood preservative. This is a water-based wood preservative, which contains copper and proven organic biocides. The treatment ensures the sleepers benefit from long-term protection against fungal and insect attack when used both in and out of contact with the ground, in appropriate applications. To achieve the rich colour of our brown sleepers, Tantone 3950 has been added.

Upon natural exposure, our brown sleepers will gradually mellow over time and turn a lovely dark brown/grey colour. This weathering process does not indicate any loss of protection.

FEATURES

- FSC®-certified
- High quality – HC3 treated
- For indoor and outdoor use
- For landscaping and construction
- Long lasting

AVAILABLE IN

- 2.4m x 100mm x 200mm (true sizing 2.4m x 96mm x 196mm)
- 1.2m x 100mm x 200mm (true sizing 1.2m x 96mm x 196mm).

111

Green Planed & Bevelled Sleepers (PAR)

PRODUCT DETAILS

The AHS PAR green sleepers have been processed to achieve a smoother surface, with the square edges bevelled to achieve a smoother surface. Virtually splinter free, these sleepers are perfect for children's play areas and schools.

Our FSC®-certified sawn softwood sleepers have been pressure treated with Tanalith E wood preservative. This is a water-based wood preservative, which contains copper and proven organic biocides. The treatment ensures the sleepers benefit from long-term protection against fungal and insect attack when used both in and out of contact with the ground, in appropriate applications.

Upon external exposure our green sleepers will gradually mellow over time and turn a wonderful shade of silver grey. This weathering process does not indicate any loss of protection.

Heart of Eden Range

The Heart of Eden range is produced in the heart of the lush Eden Valley in Cumbria. With the River Eden at its centre, it stretches from the charming market town of Penrith to the rolling Howgills, with the Pennines to the east and the towering Lake District fells to the west.

With the environment central to our company ethos, the Heart of Eden range is from sustainable sources obtained as close to utilisation as possible, therefore minimising the carbon miles travelled. We are also committed to reducing carbon emissions by ensuring that our All-Purpose Compost is Peat-Free. The

destruction of peat bogs not only adds to climate change, it removes an essential habitat for native plants and wildlife.

The Heart of Eden range is ideal for both smaller projects and large schemes. Speak to a member of our sales team today to get started.

All-Purpose Natural Compost – Peat Free

PRODUCT DETAILS

All-Purpose Natural Compost is an environmentally friendly all-rounder product, suitable for indoor plants and outdoors in your garden. It can be used for sowing seeds, rooting cuttings and filling pots, hanging baskets and tubs. All-Purpose Natural Compost is based on premium quality ingredients, enriched with naturally occurring nutrients and balanced fertiliser levels to ensure healthy and vigorous plants at all stages of growth and under a variety of situations, for use all year round.

This product is free from peat, which is an increasingly rare natural resource. Peat bogs are an invaluable habitat for flora and fauna and an important store of carbon – destroying them to make garden compost contributes to battling climate change.

USES

- Fertiliser to encourage healthy growth
- Gives plants and seeds a great start when sowed
- Allows flowers and vegetables to flourish and grow

Decorative Bark

PRODUCT DETAILS

Decorative Bark is a long-lasting, natural product. It can be used as ornamental ground cover for beds and borders, and it provides a clean visual background that will showcase flowers and foliage when used as a mulch. As well as making gardens look attractive, it can help suppress weeds and retain soil moisture during dry spells.

The rich colour of Decorative Bark provides an attractive backdrop to plants and shrubs, giving a neat and finished appearance to beds and borders.

FEATURES

- Ornamental mulch
- Low-maintenance gardening
- Suppressing weeds

APPLICATION RATE

Spread Decorative Bark to a depth of 25mm (1 "); 50mm (2) is required for effective weed suppression. Raking over will help give a more even appearance. Leave a gap of approximately 25mm-50mm (1 -2) between the bark and base of the plant to protect delicate plants.

BAGS

Composted Bark Fines

PRODUCT DETAILS

Composted Bark Fines are a long-lasting, durable and natural type of mulch. They are ideal for all kinds of flower beds, borders and large containers, and provide optimum weed suppression and moisture retention. This is a composted product, so it is more durable than other bark products and enriches soil fertility over time by slowly releasing nutrients into the soil.

With their rich dark colour, Composted Bark Fines create an inviting appearance in the garden by beautifully showcasing flowers and foliage.

USES

- As much for beds and borders
- For weed suppression and low maintenance
- Enrich soil over time.

APPLICATION RATE

If you are using Composted Bark Fines as a soil conditioner, spread them on the soil with the help of a rake to a depth of 2.5-5cm (1 -2). The minimum depth for effective weed suppression is 5cm (2"). If the soil is very heavy and chalky, you can apply Composted Bark Fines to a depth of 10cm (4").

If you are using Composted Bark Fines as a mulch, spread them on the soil with the help of a rake to a depth of 2.5-5cm (1 -2). Make sure to leave a gap between stems and mulch to avoid plant damage.

Pine Bark Nuggets

PRODUCT DETAILS

Pine Bark Nuggets is a premium-grade, natural bark which lasts much longer than other bark products. It can be used as ornamental ground cover for beds and borders, providing a clean visual background that will showcase flowers and foliage when used as a mulch. As well as making gardens look attractive, it can help suppress weeds, and retain soil moisture during dry spells. It is also certified for use in play areas.

USES

- Ornamental mulch
- Low-maintenance gardening
- Suppressing weeds
- Children's play areas
- Walkways.

APPLICATION RATE

Spread Pine Bark Nuggets to a depth of 25mm (1"). 50mm (2") is required for effective weed suppression. Raking over will help give a more even appearance. Leave a gap of approximately 25mm-50mm (1"-2") between the bark and base of the plant, to protect delicate plants.

For playgrounds, the depth will depend on the surface on which the bark is to be laid. Spread Pine Bark Nuggets to a depth of 20cm (8") over a soil surface, 25cm (10") over a tarmac surface and 30cm (12") over a concrete surface. Raking over will help give a more even appearance

Hardwood Play Chips

PRODUCT DETAILS

Hardwood Play Chips is a long-lasting, durable and natural product. It is easy to maintain and provides an attractive but very safe surface for playgrounds and gardens.

Hardwood Play Chips are impact-absorbing, which makes this material ideal for playgrounds and leisure areas as it reduces the effect of falls. It is particularly well-suited for areas under slides and around climbing equipment. It is undyed, so does not stain clothes. This product has been tested to the BSEN1177 standard.

It combines the highly decorative qualities of a natural mulch providing an attractive finish to beds and borders with the shock-absorption and cushioning characteristics of a product certified for use in play areas.

USES

- Surface for recreational and play areas
- Creating and edging walkways and paths
- As mulch for beds and borders

APPLICATION RATE

For use in a play area, lay the product to a finished depth of 10cm (4"). We would suggest increasing this to 20cm (8") around higher risk areas such as climbing frames, swings or slides.

For beds and borders, spread Hardwood Play Chips to a depth of 2.5cm-5cm (1 -2). The minimum depth to give effective weed suppression is 5cm (2) without a weed barrier.

Empowering *CHANGE* for a brighter future

We are contributing to the Decade of Action
with the Planet Mark

In this crucial **#DecadeofAction**, measuring our own carbon footprint has been a critical step in reducing our impact on the planet and society.

We want to continue to have a positive impact through our business and hope that we can empower our community to take climate action. We hope that you will join us in this movement for change.

Each and every one of you has contributed to our achievement in becoming Planet Mark certified, and will continue to play an important role in our ongoing commitment to sustainability.

We encourage you to get in touch if you have any questions or suggestions you'd like to share with us, or to join us on this exciting journey of sustainability.

Together, we are a force for good.

We'd love to hear from you...
